

# NEW GOODKIN DAYLIGHT PROCESSING SYSTEM

- Dispenses roll film or paper and cuts it to size
- Automatically processes and delivers finished negatives in daylight
- Adapts "sheet-fed" camera to economical roll film

*Speed* the production of negatives and eliminate the need for a darkroom with Goodkin's new Daylight Processing System. This ingenious system mechanically dispenses roll film or paper, cuts it to size, exposes it, feeds it into an automatic processor and delivers a finished negative in daylight! And it does it at a cost of just eight to twelve cents per negative (8½" x 11" size)! What's more, the negative can be corrected, if necessary, before burning in a low cost paper or metal diazo plate; and a positive proof can be made easily and economically simply by reshooting the negative. Best of all, it costs only fifty cents to fill both the developer and stabilizer trays to start the unit! You can make profits on a single-job basis.

Designed to be used in conjunction with new and existing Goodkin Vertical 18" and 24" Cameras, the Daylight Processing System accepts rolls up to 12 inches wide on the 18" Vertical and up to 18" wide on the 24" Vertical, and up to 300 feet long (film may be obtained from Goodkin). It will cut to sizes up to 12" x 18" on the 18" Vertical and up to 18" x 24" on the 24" Vertical. The image may be enlarged or reduced the same number

of times as is standard for each camera. Goodkin's new Daylight Processing System will soon be available in additional sizes for other Goodkin cameras as well as for competitive equipment.

In operation, the roll film or paper is dispensed from a light-proof container. The operator can observe the length of the film dispensed and cut to the desired size. He can automatically center the film with the aid of a centering device.

At that point, exposure is made beneath red safelight plexiglass. The film or paper is then fed into an automatic processor which develops, fixes and squeegees the finished negative almost dry in ordinary room light.

**PRICES** — (F.O.B. Newark, New Jersey) — As V18" accessory: \$825 (adapter and standard processor). Domestic crating, \$20; export crating, \$40. With Vertical 18" Camera: \$1995 (V18" without Daylight Processing Unit, \$1195). Domestic crating, \$40; export crating, \$80. Quartzline Lighting System (recommended for V18" Cameras using Daylight Processing System), \$225. As V24" accessory: prices on request.
